```javascript
class Product {
    name,
    price,
    category,
    description,
    rating;

    constructor(productName, productPrice, productCategory, productDescription, productRating) {
        this.name = productName;
        this.price = productPrice;
        this.category = productCategory;
        this.description = productDescription;
        this.rating = productRating;
    }

    addToCart() { …
    }

    removeFromCart() { …
    }

    displayProduct() { …
    }

    buyProduct() { …
    }
}
```

this

name : "iphone11"

price : 125000

. . . .

plane object

let iphone = new Product ("iphone11", 125000, "mobile", "Something", 4.3).

referring → Constructor call

```
Obj.name = "Sanket";

{
    name : "Sanket"

}
```
